

A complex network graph visualization. It features a central hub-and-spoke structure with a large teal node at the center. Numerous smaller nodes are connected to this central hub and to each other, forming a dense web. The nodes are colored in three distinct groups: teal, orange, and grey. The teal nodes are primarily located in the upper right and lower right quadrants, while orange nodes are more prevalent in the upper left and lower left. Grey nodes form the background structure, often connecting the more prominent colored clusters. The overall shape is roughly circular, with many branches extending outwards from the center.
